BUILDING SOMETHING BLUE

Help us recycle
Build Something Blue.

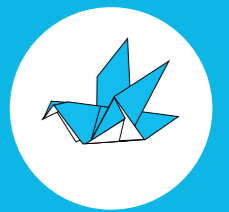

OUR SOLUTIONS

When it comes to using waste as a resource, a world of possibilities exists.

That's why we continue to develop sustainable solutions, technologies and products to minimise impact and maximise value from the waste we manage.

With rigorous processes and high quality solutions you can be confident in our ability to provide the right services to suit your business needs.

WASTE MANAGEMENT

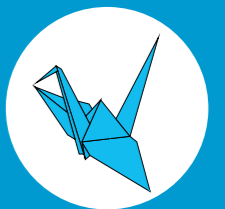

“Putting waste to good use”

Working within the industrial, commercial and residential areas of the food producing industries, we find smart solutions to collect, recover and recycle your waste and turn it into sustainable resources through our companies Envirol and Coregreen.

Whether you need to dispose of fat, oil or grease, we can use our eradication systems, high pressure drain jetting and grease traps, to keep your pipes and drainage systems squeaky clean and free from bacteria build up.

We then take that waste and put it to use, by transforming it into soil, water and brown oil that can be reused for composting, irrigation and the cosmetic industry. With our effective systems we can also recover cooking oil and turn it into bio diesel.

When it comes to waste, there’s nothing we can’t reuse.

TECHNOLOGY & PRODUCTS

“Pioneering environmental innovation”

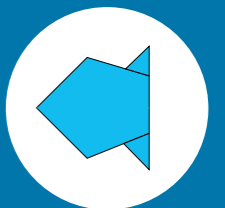

At Blue, we believe innovation is our region’s most valuable resource.

We are committed to being at the forefront of technology and investing in research and development to enhance our environmental stewardship.

That’s why we have created strategic alliances with high profile global companies including MegaLab, Kleanz and Bio- organic Catalyst. These innovative businesses have created technological breakthroughs within the energy saving, water treatment and biological chemical engineering fields.

Our products include odour and hydrocarbon remediation, water quality improvement, soil conditioning, grease and fats removal. We ensure all of our products are not only completely safe, non-toxic and bio-degradable, but offer a new model for green chemistry that improves the ecological health of ecosystems.

For us, it’s all about developing smarter, sustainable solutions for a greener future.

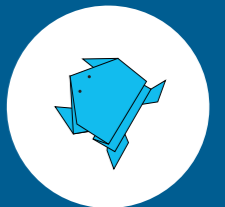

SERVICES

“Sustainable solutions at your service”

Along with highly efficient and innovative products and solutions we also offer a wide range of specialised and technical services enabling our clients to maintain the highest standards of health and security within their business.

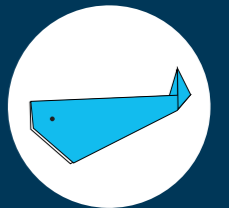

Our services include:

- Grease Traps (installation and maintenance)
- High Pressure Water Jetting
- Grease Eradication System
- Lift Station Cleaning
- Cleaning Sanitisation of HVAC Systems
- Water tank Cleaning
- Kitchen hood and Duct Service
- Kleanz^{air}

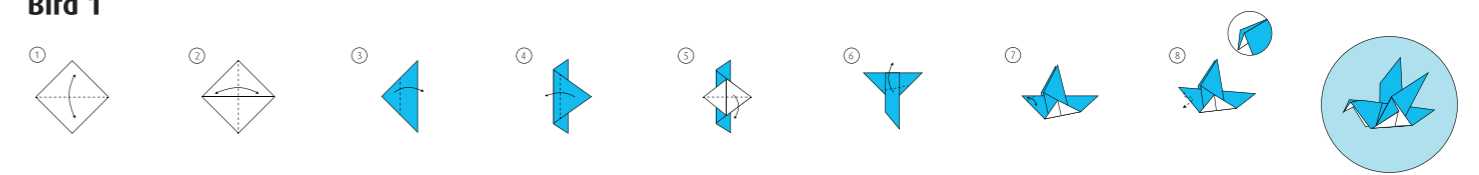

VALUE ADDED SERVICES

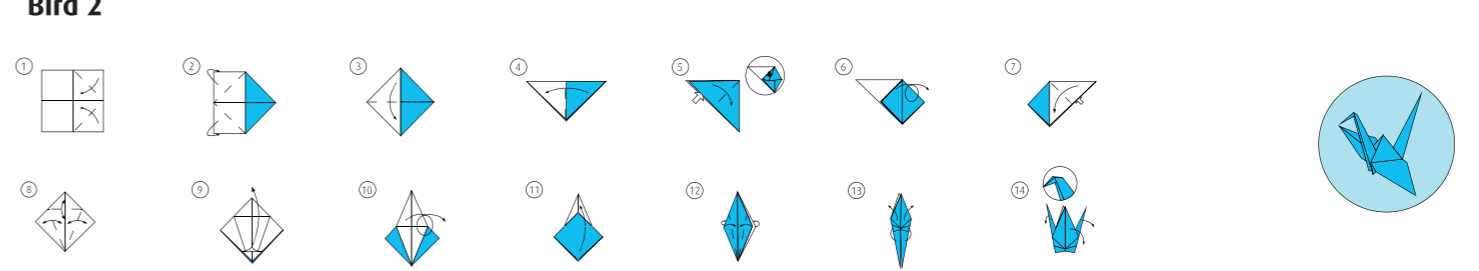

- Video inspection of drains to diagnose issues and resolve
- Installation of bacteria dosing pump
- Replacement of bacteria reservoir
- High pressure drain jetting
- 24hr emergency team
- Onsite inspections
